

6 Pillars of Safety

1. SAFE BEHAVIOUR

My best protective equipment is my behaviour and the awareness to the dangers that surround me. I respect and follow all the methodologies and rules of the project.

2. PROTECTIVE EQUIPMENT

Never start any task without the proper collective and personal protection equipment.

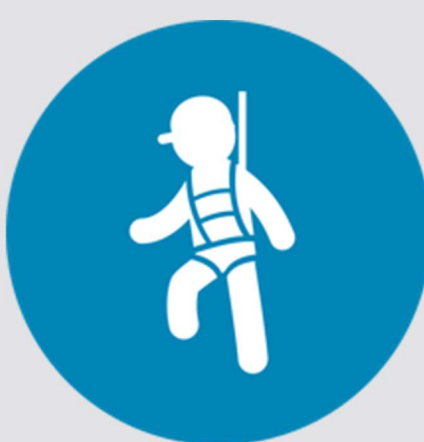

3. APPROPRIATE TOOLS AND MACHINERY

I choose the right tool for the task. If I don't know, I ask.

4. HANDLING AUTHORISED CARGO

Without authorization I don't move loads. I know that a suspense load can kill me.

5. SAFETY AND PROTECTION IN WORK AT HEIGHTS

I never start any job at height without the work permit and I always use the proper protection.

6. 5'S METHODOLOGY

Seiri (Sorting), Seiton (Straightening), Seiso (Sweeping), Seiketsu (Standardizing), Shitsuke (Sustain). I use methodology on day-to-day.
